

Payments & SEPA - Employee Guide

This document helps engineers and analysts understand how our payment rails relate to customer-facing banking products.

SEPA Credit Transfer (SCT) is the dominant euro payment scheme for retail and corporate transfers. Our platform maps internal payment orders to ISO 20022 pain.001 messages for initiation and pain.002 for status. Cut-off times are bank-specific: always check the product calendar before promising same-day value.

SEPA Instant (SCT Inst) provides up to 100,000 EUR per transaction with funds availability in seconds. Not all participant banks support full reach; use the directory service to validate creditor BIC capabilities.

Day-to-day tasks: verify IBAN with MOD-97 check, validate BIC where required, ensure purpose codes align with AML monitoring rules, and attach end-to-end ID (UETR) for tracking when the channel supports SWIFT gpi.
