

Incident Response - Payments & Core APIs

Use this runbook during sev1/sev2 incidents affecting money movement or customer channels.

Triage: confirm scope (single tenant vs. region), check status page dependencies, pull last successful deployment time.

Communications: incident commander coordinates with Legal and Comms before external messaging.

Data: capture structured logs, trace IDs, and sample correlation IDs for post-incident review within 5 business days.

Recovery: prefer fail-safe modes (queue holds, read-only) over partial debit without matching credit.
